

Electric Golf Cart Heater

Our heaters have twice the heat of other heaters while providing comfort and security. Avoid the danger of non-EPA approved propane type heaters.

Easy to install -- Three mounting options. Takes only 20 minutes to install. No drilling in most cases. Comes complete with detachable H.D. cable and fuse.

Adjusts to any direction -- The fully adjustable mounting bail allows you to control the heat direction.

Compact design -- Metal cabinet measures only 5 inches wide by 3-5/8 inches high and 6 inches deep.

Quality parts -- Constructed with high quality parts. High-tech fan with 100 cubic feet per minute output.

Works on most carts -- 36 Volt, 42 Volt and 48 Volt models are available. May be converted for a nominal charge from one voltage to another.

Two heat ranges -- High 1000 Watts/20 Amp; Low 500 Watts/10 Amps

New Feature!

Add the NEW BCM Charge Meter and never wonder how much life is left in your battery. Just like the fuel gauge in a car.

Now only \$189

BCM Battery Charge Meter

The exclusive PSH Heater with built-in Battery Charge Meter. The only heater with a built-in BCM.

If you have ever priced battery charge meters, you will find the average retail price is about \$80. Then you have the problem of mounting the meter by cutting a hole in the dash and wiring them. This is no easy task. PSH is only charging \$50 over the cost of the heater and, of course, the mounting and wiring are all done for you. We have also provided a rear panel switch which turns the battery charge meter off when not in use. The peace of mind that comes with the comfort of knowing what amount of charge is left in your golf cart battery is easily worth the price. When you pay thousands of dollars for a golf cart, this feature seems like a real bargain.

The BCM Charge Meter has a ten segment digital meter that indicates the charge you have on the golf cart batteries. This digital meter clearly indicates from fully charged to 80% of discharged. Similar to the fuel guage in an automobile. When the BCM gets down to 20% of full charge, the red indicator will start to blink.

The BCM Charge Meters are available for both 36 or 48 volt heaters. Also provided is a built in On and Off switch for use when the cart is stored for over a month.

Photo showing the BCM installed in the PSH Heater. The BCM indicates the status of the battery charge regardless of whether the heater is on or off.
